

# CDN Price List

*Valid from: June 1, 2020*

## CDN PRICELIST:

The service comprises of storage of the files related to the packages called **Web Viewer** or **Web Configurator** in the CDN network maintained by Precismo s.r.o.

CDN is a geographically distributed infrastructure of mutually collaborating servers, which enables the internet users to connect to their data faster than in case it was stored on a single, self-hosted server.

All data are physically stored on multiple servers all around the world. Every visitor of the website is connected to the server which is the nearest to their location and all data requests are carried out by this server. This results in better ping (server response time) and improved connection speed, hence quicker loading of the content. Moreover, all servers within the CDN network are connected to the core networks.

## List of all main data center locations, where your files will be stored:

### Europe

Amsterdam  
Bratislava  
Bucharest  
Frankfurt  
Kiev  
London  
Madrid
